EDUCATION

- Ph.D. 2003 Zoology and Statistics. University of Wisconsin-Madison, Madison, WI.
Advisors: Prof. Anthony R. Ives and Prof. Erik V. Nordheim
Research area: Statistical ecology and population dynamics.
- M.S. 2000 Statistics. University of Wisconsin-Madison, Madison, WI.
- B.S. 1996 Biology. Duke University, Durham, NC.

POSITIONS HELD

Professor (with tenure). North Carolina State University, Department of Statistics, Raleigh NC.
2015 – present. Core faculty member of Biomathematics Graduate Program. Associate faculty appointments: Fisheries, Wildlife, and Conservation Biology program 2010 – present, Department of Applied Ecology 2015 – present, Department of Biology 2004 – 2013. *Associate Professor* 2009 – 2015. *Assistant Professor* 2003 – 2009.

Visiting scholar. University of Washington, Department of Biology. 2016 – 2019 (portions).

Visiting fellow. Institute of Advanced Study in Toulouse. 2024.

PEER-REVIEWED PUBLICATIONS

Annotation indicating individuals working under my mentorship:

§: post-doc

†: graduate student

‡: undergraduate student

GRANTS AWARDED

9. Collaborative Research: Understanding and overcoming the impediments to high-risk, high-return science. NSF award SES-2346644. Collaboration with C.T. Bergstrom. Funded 4/15/24 – 3/31/27. \$200,282 (KG portion).
8. Collaborative Research: How do publication and funding filters shape the science that we do, and how we learn from it? NSF award SMA-1952343. Collaboration with C.T. Bergstrom. Funded 9/1/20 – 8/31/22. \$74,977 (KG portion).
7. Collaborative research: Ocean acidification and coral reefs: Scale dependence and adaptive capacity. NSF award OCE-1415300. Collaboration with R.C. Carpenter and P.J. Edmunds. Funded 1/1/15 – 12/31/19. \$99,909 (KG portion).

6. RTG: Parameter estimation methodologies for mechanistic biological models. NSF award DMS-1246991. Co-PI with A. Lloyd (lead) and 3 others. Funded 8/1/13 – 7/31/19. \$2,500,000 (total).
5. Collaborative research: Within-host microbial communities: experimentally scaling interaction dynamics across sites, regions, and continents. NSF Macrosystems award EF-1241794. Collaboration with E. Borer and 3 others. Funded 3/1/13 – 2/28/19. \$49,960 (KG portion).
4. Collaborative research: The community ecology of viral pathogens - Causes and consequences of coinfection in hosts and vectors. NSF EEID award DEB-1015825. Collaboration with C.E. Mitchell and 4 others. Funded 7/1/10 – 6/30/15. \$358,631 (KG portion).
3. Collaborative research: Does productivity drive diversity or vice versa? Empirical and theoretical investigations of the multivariate productivity-diversity hypothesis in streams. NSF award DEB-0842101. Collaboration with B. Cardinale. Funded 3/15/09 – 3/14/13. \$165,927 (KG portion).
2. Bioinformatics for IPM: Using Consultant-Generated Data to Solve Difficult Problems in Applied Insect Ecology. Subcontract on USDA-NRICGP grant 2006-01761 led by J. Rosenheim. Funded 2/15/07 – 2/14/11. \$48,081 (KG portion).
1. Collaborative: MSPA-CSE: Analysis and detection of transient dynamics in ecological systems. NSF award EF-0434298. Collaboration with A. Hastings and T. Ives. Funded 10/1/04 – 9/31/08. \$132,267 (KG portion).

PRESENTATIONS

Departmental seminars and colloquia:

25. Risk, reward, and the choices we face as scientists. Institute for Advanced Study in Toulouse, April 2024.
24. Burning money? The inherent inefficiency of grant proposal competitions in allocating research funding, and possible alternatives. NCSU Genetic Engineering & Society colloquium, January 2020.
23. Burning money? The inherent inefficiency of grant proposal competitions in allocating research funding, and possible alternatives. Duke University Dept. of Biology, November 2019.
22. Publication bias and the canonization of false facts. NOAA NMFS Northwest Fisheries Science Center, Seattle, July 2017.
21. Ecological stability (or the lack thereof) in Caribbean coral-reef communities. Washington State University, May 2016.
20. Stability of Caribbean coral-reef communities quantified by long-term monitoring and autoregressive models. Cal State University – Northridge, April 2016.
19. Stability of Caribbean coral-reef communities quantified by long-term monitoring and autoregressive models. University of Washington School of Fisheries and Aquatic Sciences Quantitative seminar, April 2016.

18. Cause-and-effect inference without controlled experiments? Quantifying secondary *Lygus* outbreaks in California cotton. NCSU Entomology seminar, November 2015.
17. Ecological stability in experimental ecosystems and in Caribbean coral reefs. NCSU Ecology and Evolutionary Biology seminar, November 2013.
16. Ecological stability in experimental ecosystems and in Caribbean coral reefs. University of North Carolina - Chapel Hill Curriculum in Ecology seminar, November 2013.
15. Mechanisms of species diversity in competitive communities. UNC-Wilmington Biology seminar, September 2009.
14. Mechanisms of species diversity in competitive communities. NOAA Fisheries Center for Coastal Fisheries and Habitat Research seminar, April 2009.
13. Mechanisms of species diversity in competitive communities. Appalachian State University Mathematics seminar, October 2008.
12. Mechanisms of species diversity in competitive communities. NCSU Statistics seminar, August 2008.
11. Resource competition in a patchy world: Using model communities to understand the causes and consequences of species diversity. University of North Carolina - Chapel Hill Curriculum in Ecology seminar, November 2007.
10. Resource competition in a patchy world: Using model communities to understand the causes and consequences of species diversity. NCSU Plant Biology seminar, October 2007.
9. Resource competition in a patchy world: Using model communities to understand the causes and consequences of species diversity. East Carolina University Ecology seminar, October 2007.
8. Does species diversity drive ecosystem productivity or vice versa? Towards a unification of historical and contemporary paradigms. NCSU Biomathematics seminar, January 2007.
7. Exploring the connections between community productivity and diversity using metacommunity models. Virginia Tech Ecology and Evolutionary Biology seminar. November 2006.
6. Two problems in statistical ecology. University of Chicago Center for Integrating Statistical and Environmental Science seminar, October 2005.
5. Estimating butterfly abundances from count data. NCSU Statistics faculty sampler, Raleigh, NC, August 2005.
4. Does extinction order matter? Modeling the functional consequences of random vs. ordered extinction. Duke University Program in Ecology seminar, April 2005.
3. Does extinction order matter? Modeling the functional consequences of random vs. ordered extinction. NCSU Biomathematics seminar, February 2005.
2. On the scope of inference for biodiversity - ecosystem function experiments. NCSU Statistics faculty sampler, Raleigh, NC, January 2004.

1. Do parasitoids control pea aphids in alfalfa? Estimating interspecific effects from ecological time series. NCSU Zoology seminar, Raleigh, NC, January 2004.

Conference and workshop presentations (oral):

22. Peer review, risky research, and the incentives scientists face. Santa Fe Institute, November 2023.
21. The inherent inefficiency of grant proposal competitions in allocating research funding, and possible alternatives. Joint Statistical Meetings (virtual meeting), August 2020 (invited).
20. Funding science in an era of scarce funds: Would a modified lottery help? American Society of Naturalists stand-alone meeting, Asilomar CA, January 2018.
19. Environmental geometry and ecological range limits can drive nuanced and realistic biodiversity gradients. American Society of Naturalists stand-alone meeting, Asilomar CA, January 2016.
18. Quantifying secondary pest outbreaks in cotton: A case study in causal inference from observational data. Entomological Society of America annual meeting, Portland OR, November 2014 (invited).
17. Stability of Caribbean coral-reef communities quantified by long-term monitoring and autoregressive models. ESA, Minneapolis MN August 2013.
16. Quantifying secondary pest outbreaks in cotton and their monetary cost with causal inference statistics. ESA, Austin, TX August 2011.
15. Does productivity drive diversity or vice versa? Reconciling old and new viewpoints in model communities. ESA, San Jose, CA August 2007.
14. Estimating rare butterfly abundance by combining multiple data types with simple population models. ENAR meetings, Atlanta, GA, March 2007 (invited).
13. Estimating butterfly abundances from count data. ESA, Memphis, TN, August 2006.
12. Estimating butterfly abundances from count data. Statistics, Combinatorics, Mathematics and Applications meeting, Auburn, AL, December 2005 (invited).
11. Modeling vital rates improves estimation of population projection matrices. ESA, Montreal, QC, August 2005.
10. Two problems in statistical ecology. JSM New Researcher's Conference, Minneapolis, MN, August 2005.
9. Estimating abundances from count data for species with discrete generations. WNAR / IBS, Fairbanks, AK, June 2005.
8. Bootstrap for broader inference in biodiversity - ecosystem function experiments. Joint Statistical Meetings, Toronto, ON, August 2004.
7. On the scope of inference for biodiversity - ecosystem function experiments. ESA, Portland, OR, August 2004.

6. Do parasitoids control pea aphids in alfalfa? A state-space approach to analyzing monitoring data. Entomological Society of America, Fort Lauderdale, FL, November 2002.
5. Modeling population dynamics with a mechanistic description of process error. ESA, Tucson, AZ, August 2002 (invited).
4. Bayesian analysis of a demographic matrix model using multiple survey data. ENAR / IBS, Charlotte, NC, March 2001.
3. Process models for long-term data: Two examples. LTER All-Scientists Meeting, Snowbird, UT, August 2000 (invited).
2. Inferring host-parasitoid stability from patterns of parasitism. ESA, Spokane, WA, August 1999.
1. Optimal sample allocation for demographic matrix models. Ninth Lukacs Symposium, Bowling Green, OH, April 1999.

Conference presentations (poster):

7. Multi-scale responses of microbial communities to environmental perturbations. Macrosystems Biology PI meeting, Arlington VA, September 2016.
6. New models for species diversity along environmental gradients. University of Oregon META Center Symposium, Eugene, OR, August 2014.
5. The community ecology of co-infection: patterns of pathogen prevalence and diversity. Ecology of Emerging Infectious Diseases PI meeting, Athens, GA, March 2013.
4. The community ecology of co-infection: localized transmission and multi-pathogen dynamics. EEID PI meeting, Berkeley, CA, March 2012.
3. Bootstrap for broader inference in biodiversity - ecosystem function experiments. Fifth Wine-miller Symposium, Columbia, MO, October 2004.
2. A Bayesian approach to demographic matrix modeling. ESA, Snowbird, UT, August 2000.
1. A Bayesian approach to demographic matrix modeling. ENAR / IBS, Chicago, IL, March 2000.

CLASSROOM TEACHING

Courses taught:

year	BIO/BMA 560	BMA567	BMA/ST 590	BMA772	BMA 801	BMA 815	ST 380	ST 512	ST 524
2003–04			x			x			
2004–05			x			x			
2005–06			x			x			
2006–07			x			x	x		
2007–08			x			x	x		
2008–09			x	x		x	x		
2009–10	x		x	x			x		
2010–11			x				xx		
2011–12			x				xx		
2012–13	x	x					x		
2013–14			x				xx		
2014–15		x	x				x		
2015–16							xx		
2016–17	x						xx	x	
2017–18		x					x		
2018–19			x	x			x		
2019–20	x						xxx		
2020–21					x		xxx		
2021–22			x				xxx		
2022–23					x		xxx		
2023–24			x				x		
2024–25							x		
totals	3	4	3	12	2	2	6	32	1

- BIO / BMA 560: Population Ecology. 3cr.
- BMA 567: Modeling of Biological Systems, with lab. 4cr.
- BMA / ST 590: Statistical Modeling in Ecology. 3cr.
- BMA772: Biomathematics II: Stochastic Modeling in the Life Sciences. 3cr.
- BMA 801: Biomathematics seminar. 1cr.
- BMA 815: Writing Science Effectively: Principles and Practice. 2cr.
- ST 380: Probability and Statistics for the Physical Sciences. 3cr.
- ST 512: Experimental Statistics for Biological Sciences II, with lab. 3cr.

- ST 524: Statistics in Plant Science, with lab. 3cr.

Other teaching:

- “Stochastic Modeling in Ecology”, 1cr graduate short course in Enhancing Linkages between Math and Ecology (ELME) program at Kellogg Biological Station, an affiliate of Michigan State University. July 2017.

STUDENTS AND POST-DOCS MENTORED

Post-docs:

1. Mordecai, Erin A. NSF Postdoctoral Research Fellow. co-mentored with Charles Mitchell (UNC-CH). January 2013 – December 2014.
2. Stone, Christopher M. NSF Postdoctoral Associate. December 2014 – June 2016.

Ph.D. students:

1. Canner, Judith. Ph.D. in Biomathematics and Zoology, 2010. Co-advised with Rob Dunn. Dissertation title: “The population ecology of ant-dispersed plants in space and time.”
2. Fiske, Ian. Ph.D. in Statistics, 2012. Dissertation title: “Characterizing spatiotemporal trends in amphibian abundance using latent variable models.” Non-thesis MS (Statistics) in 2008.
3. Backus, Gregory. Ph.D. in Biomathematics and Zoology, 2017. Co-advised with Nick Haddad. Dissertation title: “Population dynamics models of invasive rodent eradication with gene-drive technology.” Non-thesis MBMA in 2014.
4. Freedman, Andrew. On-going in Biomathematics and Entomology. Co-advised with George Kennedy. Project: Behavioral moderators of tomato spotted wilt virus spread by thrips.

M.S. (Master of Science) students:

1. Hamilton, Matthew. MS in Biomathematics, 2007. Thesis: “Local dispersal and coexistence in a metacommunity model with trophic structure.”
2. Allen, Shanae. MS co-major in Biomathematics with Operations Research (Y. Fathi, primary advisor), 2008. Thesis: “An integer programming approach to selecting individuals for transfer in pedigreed populations.”
3. Lyzinski, Rebecca. MS in Biomathematics, 2011. Thesis: “Spatial Dynamics of Infection by Multiple Pathogens: A Case Study with Yellow Dwarf Viruses”
4. Synder-Beattie, Andrew. MS in Biomathematics, 2013. Thesis: “Ecological Theory and Null Models: Predicting the Latitudinal Biodiversity Gradient with a View Towards Astrobiology.”
5. Hall, Tessa. MS in Biomathematics, 2018. Thesis: “Size-Structured Population Model for Ocean Acidification Impacts Through Effects on Demographic Processes”.

Non-thesis Masters students:

1. Wu, Yabo. Master of Biomathematics completed 2006. Project: “Using first-order autoregressive models to approximate nonlinear birth-death processes”
2. Morris, Adam. Master of Statistics completed 2011.
3. Reeder, Amanda. Master of Biomathematics completed 2019. Project: “Vector-Autoregressive-Spatial-Temporal (VAST) Model Representation of Blue Crab (*Callinectes Sapidus*) Population Density in Pamlico Sound.”

Undergraduates:

1. Kalendra, Eric. 2004–05. Project: Statistical methods for estimating abundance of rare butterflies. Awarded Best Poster for this work at NCSU’s 2005 Undergraduate Research Symposium.
2. Weikel, Daniel. 2014. Project: Modeling the temperature dependence of vector transmission of disease.

Service on 66 additional graduate student committees.

SERVICE

Editorial service:

- Associate Editor, *Ecology Letters*, 2007 – 2013.
- Associate Editor, *Theoretical Ecology*, 2011 – 2017.
- Associate Editor, *The American Naturalist*, 2013 – 2022.
- Guest Subject Matter Editor, *Ecological Applications*, 2014.
- External D. Phil. examiner, James Cook University.
- Reviewer for *Agricultural and Forest Entomology*, *The American Naturalist*, *The American Statistician*, *Annals of Applied Statistics*, *Bayesian Analysis*, *Biocontrol*, *Biometrics*, *Biostatistics*, *Biotropica*, *Bulletin of Mathematical Biology*, *Computational Statistics and Data Analysis*, *Conservation Biology*, *Ecography*, *EcoHealth*, *Ecological Applications*, *Ecological Complexity*, *Ecology*, *Ecology Letters*, *Ecoscience*, *eLife*, *Field Methods*, *Frontiers in Ecology and the Environment*, *Integrative and Comparative Biology*, *Journal of Agricultural, Biological, and Environmental Statistics*; *Journal of Animal Ecology*, *Journal of Biological Dynamics*, *Journal of Mathematical Biology*, *Journal of the American Statistical Association*, *Journal of Theoretical Biology*, *Mathematical Biosciences*, *Methods in Ecology & Evolution*, *Nature*, *Nature Ecology & Evolution*, *Nature Machine Learning*, *Oecologia*, *Oikos*, *Operations Research*, *PeerJ*, *PNAS*, *Proceedings of the Royal Society Series B*, *Quaternary Science Review*, *Royal Society Open Science*, *Science*, *Theoretical Ecology*, *Theoretical Population Biology*, *Transactions of the American Fisheries Society*.

Other service:

- Co-author of the R package `mvnmle` (multivariate normal maximum likelihood estimation).

- Co-organized oral session entitled: “What is the right size model? Views on model complexity and parsimony from different statistical paradigms.” ESA, San Jose, CA, August 2007.
- Executive committee (elected), Theoretical Ecology Section of the Ecological Society of America, August 2009-11 (one-year term as vice chair followed by one-year term as chair).
- Co-organized Ignite oral session entitled: “Theory vs. empiricism in the advancement of science.” ESA, Sacramento, CA, August 2014.
- NSF panel service (2007, 2010, 2011, 2012, 2013, 2014, 2016).
- WCU (World Class University) grant-review panel (2008, 2009, 2010).
- Mentor, ESA Theoretical Ecology section mentoring program, 2015 – 2016.
- Co-led professional development workshop for science faculty at the North Carolina School of Science and Math, 2022
